

Lake Ride Pros

Camden County Treatment Court Transportation

INTERNAL OPERATIONS GUIDE

LRP DRIVER PORTAL STAFF WORKFLOW

Review. Build in Moovs. Reconcile.

The complete staff-side process for managing portal requests, entering the right identifiers in Moovs, confirming rides, handling follow-ups, and keeping participant access ready.

1. Review

Claim the request, verify eligibility and route details, then acknowledge it.

2. Schedule

Create the reservation in Moovs with the exact request reference and participant phone.

3. Reconcile

Let sync confirm the request, then clear exceptions, actions, and reporting items.

Open the staff workspace

LRP Driver Portal → Camden County

Updated

August 2026

1. Start in the request queue

Use the Camden County workspace as the control center. Start with work requiring attention—not with the oldest item you happen to see.

The screenshot displays the 'Camden County' workspace in the Lake Ride Pros system. The interface includes a sidebar with navigation options like 'Rides', 'Clock', 'Inspection', 'Pay', 'Ops', 'Support', 'Wire', 'Walkie', 'Jents', 'ings', 'in Center', and 'Bullock'. The main content area is titled 'TREATMENT COURT TRANSPORTATION' and 'Camden County'. It features a 'Request queue' button and tabs for 'Riders', 'Locations', 'Ride types', 'Reporting', and 'Program setup'. A summary bar shows 'PENDING 1', 'IN PROGRESS 2', 'CONFIRMED 1', 'NEEDS ATTENTION 2', and 'SYNCED SPEND \$86.50'. Below this, there are two alert boxes: one for '2 Moovs review items' and another for 'CC-20260826-0098' with a 'Not a no-show' button. A list of requests is shown, including one for 'Jordan Ellis' with details like 'CC-20260827-0001', '2026-08-27 · 10:30 AM', and 'Jordan's home → Compass Health — Camdenton'. The request is marked 'PENDING' and 'Unclaimed'. There are buttons for 'Copy reference' and 'Copy Moovs summary'.

Sample local fixture data. Live records contain confidential participant and program information.

1

Scan the alerts

Resolve missing references, duplicate matches, phone mismatches, and likely no-shows before they age.

2

Filter the queue

Prioritize Needs information, Pending near target, and active change or cancellation requests.

3

Open one request

Review the participant, phone, timing, route, notes, messages, and timeline before acting.

Daily order: reconciliation issues → needs-attention work → pending requests near review target → acknowledged requests awaiting Moovs scheduling → follow-up actions → no-shows.

2. Claim, verify, and acknowledge

Requests begin unclaimed. Claim the record before working it so another staff member can see who owns the next step.

The screenshot displays the LRP Driver Portal interface. On the left, a list of requests is shown with status indicators: 'Avery Morgan' (Cancellation Requested), 'Taylor Reed' (Confirmed), and 'Casey Williams' (Needs Information). The main panel shows details for a selected request (Avery Morgan) including Ride Type (Drug Testing), Service (2026-08-27 at 10:30 AM), Pickup (Jordan's home), Destination (Compass Health — Camdenton), Moovs Trips (Not linked), Synced Cost (Waiting for Moovs), SLA Due (Aug 31, 2026, 10:50 PM), and Assigned (Unclaimed). A 'Rider note' section contains the text 'Please call when outside.' Below this is a 'Process request' section with a green 'Claim request' button. An 'Explanation to rider (when needed)' text area is present, followed by four status buttons: 'Acknowledged', 'Needs information', 'Declined', and 'Cancelled'. A user profile for 'Nate Bullock' is visible in the top right corner.

The available controls change with the request status and the action currently in progress.

1 Select Claim request.

Confirm the assignment shows you before making a status change.

2 Verify the basics.

Participant, verified phone, date, pickup/arrival timing, approved pickup, destination, companion, and notes.

3 Choose the right status.

Use Acknowledged when valid and ready for Moovs entry; Needs information when something is missing.

4 Explain adverse outcomes.

Declined requires a clear rider-visible reason. Cancelled is for a request that will not proceed.

There is no "Approve request" button. For a valid ride request, **Acknowledged** means "LRP reviewed it and is working on scheduling." It is not a ride confirmation. **Approve transportation** is a separate participant eligibility control.

3. Moovs field map: what goes where

The exact request reference and the participant's verified phone are the two keys that let LRP Driver Portal find the Moovs trip and confirm the portal request.

LRP Driver Portal request reference

CC-20260827-0001

Select **Copy reference**.

Moovs reservation

External Reference Number

Paste the exact reference—no extra words.

From LRP Driver Portal	Where it goes in Moovs	Rule
Request reference	Reservation → External Reference Number	Paste the exact CC-... value. Never leave it only in trip notes.
Participant + verified phone	Passenger on the reservation + Passenger Phone Number	Select/create the correct passenger. The phone must match the verified portal phone.
Service date and timing	Reservation date, pickup time, and/or arrival timing	Use the request details to schedule the operationally correct pickup.
Approved pickup + destination	Pickup and drop-off locations	Use the approved/requested route. Resolve any destination review first.
Companion + rider notes	Appropriate reservation notes, only if operationally needed	Carry only information the driver/dispatch team needs.
Copy Moovs summary	Working checklist while building the reservation	Helpful for entry; it does not replace External Reference Number.
Moovs Full Confirmation / trip ID	Nowhere to paste in LRP Driver Portal	The sync captures the stable Moovs ID automatically.

Copy Moovs summary example:

CC-20260827-0001

Jordan Ellis · +15735550142

2026-08-27 at 10:30 AM

Jordan's home → Compass Health – Camdenton

Do not mix up IDs. Allowed Moovs company IDs and booking contact IDs belong in **Program setup** and control which Moovs records the integration can discover. They are not per-request reference numbers and should not be changed casually.

4. Let sync confirm—and clear exceptions

LRP Driver Portal checks Moovs on a 15-minute cadence. A pending request confirms automatically only when it finds one in-scope Moovs trip with both the exact reference and verified passenger phone.

1. Acknowledge

Request is reviewed and ready to schedule.

2. Build in Moovs

Correct passenger, phone, route, time, and external reference.

3. Sync matches

Exact reference + verified phone + allowed program scope.

4. Confirmed

Request links to the trip and the participant receives confirmation SMS.

TREATMENT COURT TRANSPORTATION

Camden County

Review, acknowledge, and reconcile every Camden County ride request from one auditable workspace.

1 15-MINUTE MOOVs SYNC LOCAL FIXTURE MODE

2

Request queue Riders Locations Ride types Reporting

PENDING 1 **IN PROGRESS 2** **CONFIRMED 1** **NEEDS ATTENTION 2** **SYNCED \$86.5**

2 Moovs review items
External references, passenger phones, and possible no-shows require an LRP decision.

CC-20260827-0001
External reference matched, but passenger phone did not.

Use the reconciliation cards and request detail to investigate records that did not link cleanly.

Missing reference

Add the exact request reference to the Moovs External Reference Number field, then allow sync to retry.

Phone mismatch

Verify the Moovs passenger is the participant and correct the passenger phone. Never force a match by guessing.

Duplicate reference

Review every Moovs trip carrying the reference. Round trips can be valid; unintended duplicates must be corrected.

Linked

Moovs remains the pricing and operational source of truth. Multiple trip rows may link to one round-trip request.

Likely no-show: review the trip evidence, then choose **Not a no-show** or **Confirm no-show**. Add a concise audit note when context will help the next reviewer.

5. Process changes, cancellations, and messages

Participant actions remain attached to the original request. LRP Driver Portal records the conversation and audit trail; the actual operational change still happens in Moovs.

The screenshot displays the LRP Driver Portal interface. On the left, a list of participant requests is shown, each with a status badge and a numbered callout:

- Avery Morgan**: CANCELLATION REQUESTED (1). CC-20260827-0002. 2026-08-28 · 8:15 AM. Avery's home → Compass Health — Lebanon. Treatment. Owned by Nate Bullock.
- Taylor Reed**: CONFIRMED (1). CC-20260826-0098. 2026-08-27 · 1:00 PM. Taylor's home → Labcorp — Osage Beach. Drug Testing. Owned by Michael.
- Casey Williams**: NEEDS INFORMATION (1). CC-20260825-0077. 2026-08-29 · Time pending. Casey's home → Pending approval. Court. Owned by Jim.

On the right, a detailed view of a request is shown for Nate Bullock. It includes fields for RIDE TYPE (Treatment), SERVICE (2026-08-28 at 8:15 AM), PICKUP (Avery's home), DESTINATION (Compass Health — Lebanon), MOOVS TRIPS (Not linked), SYNCED COST (Waiting for Moovs), SLA DUE (Sep 1, 2026, 1:36 AM), and ASSIGNED (Nate Bullock). Below these is a **Rider note** (2) stating "Round trip; return unknown." and a **Process request** section with a **Release assignment** button. An **Active cancellation request** (3) is also shown, indicating a schedule change and an appointment move, with a note to acknowledge it to show the rider it is being handled.

Sample fixture data. The rider-visible update and internal note serve different audiences.

1 Claim and review the action.

Read the participant's reason, timing, current Moovs trip, and action deadlines.

2 Acknowledge the action.

Tell the participant it is being handled; do not imply the Moovs change is complete yet.

3 Update Moovs manually.

Change or cancel the operational reservation and verify the result in Moovs.

4 Complete the action in LRP Driver Portal.

Record the participant-facing outcome and any necessary internal audit context.

Shared rider message

Visible to the participant and coordinator. Write clearly, professionally, and with no internal-only detail.

LRP-only note

Never shown to the participant/coordinator. Use for concise operational or audit context.

6. Manage participants through three separate gates

Transportation eligibility, portal login, and approved pickups are independent. Enabling one does not automatically enable the others.

Approved pickup locations
Roster addresses remain reference-only until a pickup is explicitly added and approved. Add pickup

Home • Default
202 Oak Ave, Apt 2, Camdenton, MO 65020 1 2 APPROVED Edit pickup

Transportation eligibility 3 PENDING REVIEW Approve transportation

Portal login ENABLED Suspend portal access

Casey Williams
+15735550119 • casey@example.com **Not provided** **Pending review** **1 of 2** **\$86.50** NOT ASSIGNED ✓

A new participant starts pending, without a portal identity, and without an approved pickup.

1

Transportation eligibility

Approve transportation only after program authorization. Suspend/resume separately when eligibility changes.

2

Approved pickup

Add, approve, edit, and select a default pickup. The roster/source home address is reference-only—not automatically approved.

3

Portal login

Enable access only when the participant is ready. Suspend/reactivate login without changing transportation eligibility.

Safe onboarding order

1. Verify identity and mobile phone.
2. Approve transportation if authorized.
3. Add and approve the pickup; set the default.
4. Enable portal access and verify the user can sign in.

Before troubleshooting requests

- Eligibility is active.
- Portal login is active.
- At least one pickup is approved.
- Ride type and destination are allowed.
- The verified phone is current.

7. Keep locations and ride rules current

These settings control which routes participants can request and when the portal allows a request, change, or cancellation.

Left: destination review and catalog. Right: ride-type policy and service targets. Sample fixture data.

Locations

- ✓ Review pending rider destinations before use.
- ✓ Approve or reject with enough context for the audit trail.
- ✓ Keep destination names, categories, addresses, and active status accurate.
- ✓ Do not treat a roster home address as an approved pickup.

Ride types

- ✓ Advance notice and same-day rules determine when requests are allowed.
- ✓ Change/cancel cutoffs determine whether participant actions are available.
- ✓ Acknowledge and confirmation targets drive queue urgency.
- ✓ Policy changes affect future participant behavior immediately—verify before saving.

Configuration changes have program-wide impact. Confirm any policy or location change with the program owner before editing. Preserve the reason for material changes in the appropriate operational record.

8. Reporting and protected program setup

Use Reporting for evidence and exports. Use Program setup only for authorized administrative changes—not routine request processing.

The left screenshot shows the 'Reporting' tab for 'Camden County'. It includes a 'Program baseline' section with 'APPROVED RIDERS' (3) and 'TOTAL REQUESTS' (4), and 'MOOVS-LINKED COST' (\$86.50). It also shows 'Invoice records' for 'LRP-CC-0001' with a 'DRAFT' status and a value of '\$2,841'. A 'Download CSV report' button is present.

The right screenshot shows the 'Program setup' tab for 'Camden County'. It includes a 'Program controls' section with fields for 'Program name' (Camden County Treatment Court), 'Support phone' (+15735523232), 'Program start date' (09/01/2026), 'Billing cycle' (Calendar month), 'Budget amount' (12000), 'Budget period start' (09/01/2026), 'Budget period end' (08/31/2027), 'Default acknowledge target (minutes)' (120), 'Default confirm target (minutes)' (1440), 'Internal SMS recipients' (+15735523232), and 'Report recipients' (rebecca@example.com).

Sample fixture data. Never share screenshots or exports outside approved program channels.

Reporting

- Filter the correct period before reviewing totals.
- Use linked Moovs costs and invoice evidence as the operational record.
- Export CSV only when needed and store it in an approved location.
- Payments and accounting actions remain outside the portal.

Program setup

- Support phone, program dates, budgets, and report/SMS recipients.
- Allowed Moovs company and booking contact IDs define integration scope.
- These IDs are not request references.
- Verify authorization and exact values before any change.

High-risk area: a wrong allowed company ID or booking contact ID can hide valid trips or pull the wrong records into reconciliation. Do not experiment. If uncertain, stop and verify with the program owner or integration administrator.

9. The complete request checklist

Use this sequence every time. The goal is a clean participant experience, a correct Moovs reservation, and an auditable LRP Driver Portal record.

1

Claim the request.

Confirm ownership before touching status or messages.

2

Verify participant readiness.

Eligibility, verified phone, approved pickup, destination, ride type, and timing.

3

Read the full record.

Route, appointment/arrival time, companion, notes, conversation, and active actions.

4

Acknowledge—or ask.

Acknowledge valid work. Use Needs information or Declined with a clear rider-visible explanation.

5

Copy the reference.

Paste the exact **CC—...** into Moovs External Reference Number.

6

Build the Moovs reservation.

Correct participant and phone, schedule, route, notes, company, and booking contact.

7

Wait for the 15-minute sync.

Do not manually claim confirmation. Confirmed follows a clean reference + phone match.

8

Resolve any exception.

Missing reference, phone mismatch, duplicates, or out-of-scope company/contact.

9

Process follow-ups in both systems.

Acknowledge in LRP Driver Portal, change/cancel in Moovs, then complete the portal action.

10

Close the loop.

Verify participant-facing status, record concise audit context, and clear the queue item.

The one-line rule: **CC request reference** goes in **Moovs External Reference Number**; the verified participant mobile goes on the **Moovs passenger**. When both match, sync does the rest.

Stop and verify when...

- The participant phone differs between systems.
- More than the expected trip rows use a reference.
- The trip is not in the allowed company/contact scope.
- Someone asks for a program-wide settings change.
- You cannot tell whether a message is participant-visible.

Privacy and audit

- LRP Driver Portal data is confidential.
- Use only the information needed to schedule and support the ride.
- Do not share exports, screenshots, or participant details in unapproved channels.
- Never put credentials or secrets in notes.
- Sign out or lock the device when finished.
